New welding machine for Doha Precast Factory in Qatar

In 2006, Doha Precast Factory opened its first concrete pipe plant. A short time later, Mr. Nasser Kammar was appointed General Manager and has been responsible for the strong and continuous growth of the company ever since. Not only has the sales volume risen steadily, but the product range has also been constantly expanded.

In addition to reinforced pipes, the product range now also includes shafts and shaft bases with and without flow channel. Many of the products have very demanding dimensions, wall thicknesses and weights. The production of plastic pipes and liners for pipes and shafts, as well as glass fiber reinforced plastic pipes is also carried out „in-house“ at Doha Precast Factory.

Mr. Nasser Kammar is very quality-conscious when it comes to new investments and places very high demands on the delivered goods. When he urgently needed a new reinforcement welding machine at the beginning of 2021, apilion machines + services GmbH was one of the companies asked to submit an offer. apilion then recommended a reinforcement welding machine of the type SMS 160/12 LD for reinforcement cages measuring 340 to 2,000 mm in diameter and up to 3,000 mm in length.

After clarifying the technical parameters of the machine and pointing out certain advantageous properties, such as the absence of hydraulic components, the customer opted for the SMS reinforcement welding machine from apilion.

With the support of Doha Precast Factory, apilion was able to send two technicians to Doha in April to assemble the ma-

chine despite corona restrictions. Thanks to the very good preparatory work and the support of Doha Precast Factory, and even though the team experienced a for this region very rare rainy day, the machine was able to start production within a very short period of only six days, meeting all requirements for full satisfaction of the plant manager and the general manager.

The customer was very impressed with the sturdy design of the machine and the easy-to-understand control system, which ensure high productivity and fast training of the employees. apilion is happy to have gained another client from this region and to have built a partnership for the coming decades. ■
